³Member, Institute/Organization name[Font: Times New Roman, Size:11]

Abstract—[Font: Times New Roman, Size:9]These instructions give you guidelines for preparing papers for the International Journal of Innovative Research in Technology (IJIRT). Use this document as a template if you are using Microsoft Word 6.0 or later. Otherwise, use this document as an instruction set. The electronic file of your paper will be formatted further at International Journal of Innovative Research in Technology. Define all symbols used in the abstract. Do not cite references in the abstract. Do not delete the blank line immediately above the abstract.

Index Terms—[Font: Times New Roman, Size:9]About four(minimum) key words or phrases in alphabetical order, separated by commas.

I. INTRODUCTION[Font: Times New Roman, Size:10]

[Font: Times New Roman, Size:10]Highlight a section that you want to designate with a certain style, then select the appropriate name on the style menu. The style will adjust your fonts and line spacing. **Do not change the font sizes or line spacing to squeeze more text into a limited number of pages.** Use italics for emphasis; do not underline.

To insert images in Word, position the cursor at the insertion point and either use Insert | Picture | From File or copy the image to the Windows clipboard and then Edit | Paste Special | Picture (with —Float over text| unchecked)(keep text wrapping top-bottom).

INTERNATIONAL JOURNAL OF INNOVATIVE RESEARCH IN TECHNOLOGY reserves the right to do the final formatting of your paper.

II. PROCEDURE FOR PAPER SUBMISSION

A. Review Stage

Submit your manuscript electronically for review. prepare it in two-column format, including figures

and tables(until it don't fit properly and data is not visible).

B. Final Stage

After your paper has been accepted. The authors of the accepted manuscripts will be given a copyright form and the form should accompany your final submission.

C. Figures

As said, to insert images in Word, position the cursor at the insertion point and either use Insert | Picture | From File or copy the image to the Windows clipboard and then Edit | Paste Special | Picture (with —Float over text| unchecked).

III. MATH

If you are using Word, use either the Microsoft Equation Editor or the MathType add-on (<http://www.mathtype.com>) for equations in your paper (Insert | Object | Create New | Microsoft Equation or MathType Equation). —Float over text| should not be selected.

IV. UNITS

Use either SI (MKS) or CGS as primary units. (SI units are strongly encouraged.) English units may be used as secondary units (in parentheses). This applies to papers in data storage. For example, write —15 Gb/cm² (100 Gb/in²).¹ An exception is when English units are used as identifiers in trade, such as —3½ in disk drive.¹ Avoid combining SI and CGS units, such as current in amperes and magnetic field in oersteds. This often leads to confusion because equations do not balance dimensionally. If you must use mixed units, clearly state the units for each quantity in an equation.

The SI unit for magnetic field strength H is A/m. However, if you wish to use units of T, either refer to magnetic flux density B or magnetic field strength

symbolized as $\mu_0 H$. Use the center dot to separate compound units, e.g., $\text{—A} \cdot \text{m}^2$.

V. HELPFUL HINTS

A. Figures and Tables

Because the final formatting of your paper is limited in scale, you need to position figures and tables at the top and bottom of each column. Large figures and tables may span both columns. Place figure captions below the figures; place table titles above the tables. If your figure has two parts, include the labels —(a) and —(b) as part of the artwork. Please verify that the figures and tables you mention in the text actually exist. Do not put borders around the outside of your figures. Use the abbreviation —Fig. even at the beginning of a sentence. Do not abbreviate —Table. Tables are numbered with Roman numerals. Include a note with your final paper indicating that you request color printing. Do not use color unless it is necessary for the proper interpretation of your figures. There is an additional charge for color printing. Figure axis labels are often a source of confusion. Use words rather than symbols. As an example, write the quantity—Magnetization, or —Magnetization M, not just —M. Put units in parentheses. Do not label axes only with units. As in Fig. 1, for example, write —Magnetization (A/m) or —Magnetization ($\text{A} \cdot \text{m}^{-1}$), not just —A/m. Do not label axes with a ratio of quantities and units. For example, write—Temperature (K), not —Temperature/K. Multipliers can be especially confusing. Write—Magnetization (kA/m) or —Magnetization (10^3 A/m). Do not write —Magnetization (A/m) X 1000 because the reader would not know whether the top axis label in Fig. 1 meant 16000 A/m or 0.016 A/m. Figure labels should be legible, approximately 8 to 12 point type.

B. References

Number citations consecutively in square brackets [1]. The sentence punctuation follows the brackets [2]. Multiple references [2], [3] are each numbered with separate brackets [1]–[3]. When citing a section in a book, please give the relevant page numbers [2]. In sentences, refer simply to the reference number, as in [3]. Do not use "Ref. [3]" or "reference [3]"

except at the beginning of a sentence:

"reference [3]" shows.... Number footnotes separately in superscripts

(Insert|Footnote).¹ Place the actual footnote at the bottom of the column in which it is cited; do not put footnotes in the reference list (endnotes). Use letters for table footnotes (see Table I).

Please note that the references at the end of this document are in the preferred referencing style. Give all authors' names; do not use "et al." unless there are six authors or more. Use a space after authors' initials. Papers that have not been published should be cited as "unpublished" [4]. Papers that have been submitted for publication should be cited as "submitted for publication" [5]. Papers that have been accepted for publication, but not yet specified for an issue should be cited as "to be published" [6]. Please give affiliations and addresses for private communications [7]. Capitalize only the first word in a paper title, except for proper nouns and element symbols. For papers published in translation journals, please give the English citation first, followed by the original foreign-language citation [8].

C. Abbreviations and Acronyms

Define abbreviations and acronyms the first time they are used in the text, even after they have already been defined in the abstract. Abbreviations such as SI, ac, and dc do not have to be defined. Abbreviations that incorporate periods should not have spaces: write "C.N.R.S.," not "C.N.R.S." Do not use abbreviations in the title unless they are unavoidable (for example,—"INTERNATIONAL JOURNAL OF INNOVATIVE RESEARCH IN TECHNOLOGY" in the title of this article).

D. Equations

Number equations consecutively with the equation number in parentheses flush with the right margin, as in (1). First use the equation editor to create the equation. Then select the "Equation" markup style. Press the tab key and write the equation number in parentheses. To make your equations more compact, you may use the solidus (/), the exp function, or appropriate exponents. Use parentheses to avoid ambiguities in denominators. Punctuate equations when they are part of a sentence, as in

$$\int_0 F(r, \varphi) dr d\varphi = [\sigma r_2 / (2\mu_0)] \quad (1)$$

Be sure that the symbols in your equation have been defined before the equation appears

or immediately following.
Italicize symbols (T might refer to temperature, but T is the unit Tesla). Refer to "(1)," not "Eq.(1)" or "equation(1)," except at the beginning of a sentence: "Equation(1) is..."

VI. PUBLICATION PRINCIPLES

The contents of the journal are peer-reviewed and archival. International

Journal of Innovative Research in Technology publishes scholarly articles of archival value as well as tutorial expositions and critical reviews of classical subjects and topics of current interest.

Authors should consider the following points:

- 1) Technical papers submitted for publication must advance the state of knowledge and must cite relevant prior work.
- 2) The length of a submitted paper should be commensurate with the importance, or appropriate to the complexity, of the work. For example, an obvious extension of previously published work might not be appropriate for publication or might be adequately treated in just a few pages.
- 3) Authors must convince both peer reviewers and the editors of the scientific and technical merit of a paper; the standards of proof are higher when extraordinary or unexpected results are reported.
- 4) Because replication is required for scientific progress, papers submitted for publication must provide sufficient information to allow readers to perform similar experiments or calculations and use the reported results. Although not everything need be disclosed, a paper must contain new, useable, and fully described information. For example, a specimen's chemical composition need not be reported if the main purpose of a paper is to introduce a new measurement technique. Authors should

expect to be challenged by reviewers if the results are not supported by adequate data and critical details.

VII. CONCLUSION

A conclusion section is not required. Although a conclusion may review the main points of the paper, do not replicate the abstract as the conclusion. A conclusion might elaborate on the importance of the work or suggest applications and extensions.

APPENDIX

Appendices, if needed, appear before the acknowledgment.

ACKNOWLEDGMENT

The preferred spelling of the word—acknowledgment—in American English is without an *e* after the *g*. Use the singular heading even if you have many acknowledgments. Avoid expressions such as "One of us (S.B.A.) would like to thank...." Instead, write "F.A. Author thanks...." **Sponsor and financial support acknowledgments are placed in the unnumbered footnote on the first page.**
